Abstract: This system is proposed for the Educational Institutions, to specify examination hall allotment by manual work. It facilitates to access the examination information of a particular student in a particular class.The main motive of system is when examination arrives, lot of work like managing the time table, seating arrangement and invigilation allotment which will be done manually and it takes lots of time. The purpose of developing Examination operation automation System is to computerize the traditional way of conducting examinations. Another purpose of developing this software is to generate the report automatically during exams at the end of the session or in between the session. This project will help to reduce man work power because now days in day-to-day life the use of android and computers are increasing. It has some features of keeping report of student supplement.

INTRODUCTION

The Exam Hall Management System is a web-primarily based totally software designed to control the complete examination corridor process. This device permits the directors to create and control examination schedules, control students attendance, and tests with ease. The device's robustness and ease make it a really perfect answer for instructional establishments trying to streamline their examination control process.

Most of the crucial tactics in an academic institute are achieved manually which includes coaching and nonteaching team of workers details, scholar records and wide variety of halls to be had for the exam as most of this procedure is achieved manually it boom the paintings load and without difficulty liable to errors. The present-day structures are conventional structures which help guide tactics main to a massive time intake and pile of tough copies.

PURPOSE

The motive of growing exam control gadget is to automated the conventional manner of taking assessments. Another purpose for growing this software program is to generate the report automatically approximately the sitting association at some stage in assessments at the end of the consultation or with inside the among of the consultation.

The main purpose of the online examination program is that it allows companies/institutions to perform examinations to any number of applicants at once, in a computerized manner. It decreases enough time intake and amount of work that exist in the current program of evaluation. It also allows in saving the record of each evaluation and the results are also saved in the program

A. Benefits of this system:

1. Easy to operate
2. Reduces man power
3. Easy to update the system
4. No paper required
5. Fast system
6. Easy to handle

OVERVIEW

Examination Management System essentially has main modules for correct functioning:

- First module is admin which has proper for developing new examination modular for brand new batch and replace scholar results.
- Second module is dealt with through the person which may be a faulty or an operator. User has a proper to look the results.

SYSTEM ANALYSIS

- Existing System:

The Existing system of conducting examination process is manual. It has so many problems. So we introduce a new system, which is fully computerized. Existing system is a large man

power process and is difficult to implement. Working of existing system is given below: -
Student Registration is the first process. As the part of the registration, the student has to enter his name, address etc into the registration form. After the registration, make the question papers and it will give to the prospective student. The question papers contain total mark, subject, duration, question paper etc.
A group of person does evaluation of answer sheet. After the evaluation of the Answer sheet, the result is published. And also make the mark list.

CONCLUSION

The Examination Management System is developed using Visual Basic fully meets the objectives of the system which it has been developed. The system design and analysis has reached a steady state where all bugs have been eliminated. The system is operated at a high level of efficiency and all the teachers and user associated with the system understands its advantage. The system solves the problem. It was intended to solve as requirement specification.
